ANZTLA Conference July 2009

Cataloguing Electronic Resources

Presented by Cataloguing Team

at Charles Sturt University

Division of Library Services

 ISSN 1839-8758

Definition of terms used in Electronic Resource cataloguing Workshop based on ACCR2 glossary definitions (Appendix D - 3):

Term	Definition
Access point	• A name, term, code, etc., under which a bibliographic record may be searched and identified
Carrier	• A medium in which data, sound, images, etc., are stored e.g. HTML page, PDF file or MP3 file
Computer file	• Leader/06 "m" (computer file) restricted to: ♦ computer software (programs, games, fonts) ♦ numeric data ♦ computer-oriented multimedia ♦ online systems or services
Content	• Primary intellectual or artistic content e.g. language material or computer file
Continuing Resource	• A bibliographic resource that has **no predetermined conclusion.** • This is an umbrella concept that is used to group serials and integrating resources
Direct access resources	• The use of electronic resources via carriers e.g. CD-ROM or DVD designed to be inserted into a computerized device or its auxiliary equipment
Electronic resource	• Material (data (text, graphics, sound, images) and/or program(s) (instructions that process the data for use)) encoded for manipulation by a computerized device. • This material may require use of a peripheral directly connected to a computerized device (e.g., CD-ROM drive) or a connection to a computer network (e.g., the Internet)
Granularity	• The level of detail at which an information object or resource is viewed or described
Home page	• The first, entry page to a Web site
Integrating resource	• A bibliographic resource that is added to or changed by means of **updates that do not remain discrete and are integrated into the whole**. An integrating resource may be finite or continuing. e.g. **updating Web sites, updating databases**
Iteration	• An instance of an integrating resource, either as first published or after it has been updated
Language material	• Leader/06 "a" (language material)
Monograph	• A bibliographic resource that is complete in **one part** or intended to be completed in a **finite** number of parts
Multipart item	• A monograph complete, or intended to be completed, in a **finite number of separate parts.**
Remote access resources	• The use of electronic resources via computer networks
Serial	• A continuing resource that is **issued in a succession of discrete parts, usually** bearing numbers that has **no predetermined conclusion** e.g., **electronic journals, newsletters, annual reports, newspapers**
Web page	• A single page of Web content
Web site	• A collection of pages under one URL domain name or sub-domain name • May consist of multiple nested levels

Cataloguing electronic resources

What is an electronic resource?

"Material (data (text, graphics, sound, images) and/or program(s) (instructions that process the data for use)) encoded for manipulation by a computerized device."—ACCR2

Types of electronic resources requiring

1. Direct access refers to the direct (local) use of electronic resources via carriers (e.g., discs/disks, cassettes, cartridges) designed to be inserted into a computerized device or its auxiliary equipment.
2. Remote access refers to networked information provided by use of an input-output device (e.g., a terminal), either connected to a computer system (e.g., a resource in a network), or by use of resources stored in a hard disk or other storage device.

In this workshop we will focus on cataloguing remote electronic resources

Considerations when cataloguing electronic items

1. General information
2. Specific item details
3. Creating links

1) **General information** - criteria

i) Monograph

"A bibliographic resource that is complete in **one part** or intended to be completed in a **finite** number of parts"—ACCR2

(a) Simultaneous production

Print and electronic version produced at approximately the same time e.g. government publications

(b) Reproduction

Print reproduced in digital format at a later date, usually with the same pagination as the original item e.g. ebrary

(c) 'Born digital'

Item originally produced in digital format e.g. MP3 file

ii) Continuing resource

"A bibliographic resource that has **no predetermined conclusion**"—ACCR2

 ISSN 1839-8758

(a) Integrating resource or a serial

1. Integrating resource

"A bibliographic resource that is added to or changed by means of **updates that do not remain discrete and are integrated into the whole**. An integrating resource may be finite or continuing."—ACCR2

a. Web page

A single page of Web content

Text or manipulated

b. Updating database

2. Serial

"A continuing resource that is **issued in a succession of discrete parts, usually** bearing numbers that has **no predetermined conclusion**"—ACCR2

a. Ejournal

b. Print

c. "Born digital"

2) Specific item details

i) Determined by policy, guidelines and procedures created by individual libraries

ii) Determined by consortia

(a) e.g. UNILINC created templates with defaults

(b) Libraries Australia recommends using single records but accept records with 'additional physical form available'

(c) Libraries Australia recommend elements to be used – The following information is from Libraries Australia's *"Guidelines for cataloguing remote access electronic resources"*

Field tags	Desc.	eBook is Original	eBook is reproduction
Leader/06	Type of record	a Language material	a Language material

785 Suceeding entry	785 00 $tEducational communication and technology$x0148-5806 -
856 Electronic location and access	856 40 $u.....$4N$yClick here

3) **Creating links**

i) If resources are **free** it is recommended that links are included in the bibliographic record

ii) If libraries have to pay subscriptions for access to the link is put in the HOL to protected the link and is usually given an ezproxy

856 (Electronic Location and Access) -This field contains the URL (Uniform Resource Locator) in subfield 'u' and other details required to locate and access the resource. Most records require an 856 for the URL address and some may require extra 856 fields to indicate other access options such as ftp, table of contents, etc.

Subfield 'z' is used for additional public notes about the electronic resource.

Subfield '3' is used for material specified

It is recommended that persistent identifiers be used in NBD records where these are available. A persistent identifier is a name for a resource which remains the same regardless of where the resource is located thus ensuring that links to the resource will continue to work and remain actionable even if it is moved, or its ownership changes.
