
THEOLOGY CATALOGING BULLETIN

VOL. 17, No. 2

FEBRUARY 2009

ISSN 1548-8497 (online)

Theology Cataloging Bulletin, a quarterly newsletter of the Technical Services Section of the American Theological Library Association, is published during the months of November, February, May, and August. It contains listings of new and changed subject headings and classification numbers in appropriate subject areas as well as other information of interest to religion/theology catalogers.

The subject headings in section one of each issue are selected by Joanna Hause (Southeastern University, Lakeland, Florida) from the Library of Congress' *Subject Headings Weekly Lists*. Section two contains Library of Congress Subject Headings/DDC Numbers of Current Interest, prepared by Paul Osmanski (Marist College Library, Washington, DC), and Library of Congress Classification Additions and Changes, prepared by Eric Friede (Yale University Divinity School, New Haven, Connecticut). The general information in this publication (section three) is edited by Lynn Berg (New Brunswick Theological Seminary, New Brunswick, New Jersey).

Submissions for the newsletter should be sent to Lynn Berg, Librarian for Technical Services, Gardner A. Sage Library, New Brunswick Theological Seminary, 21 Seminary Place, New Brunswick, NJ 08901; E-mail: lberg@nbts.edu, Fax: 732.249.5412, Telephone: 732.247.5243

Deadlines for submission are April 15 (May issue), July 15 (August issue), October 15 (November issue), and January 15 (February issue).

Appropriate types of submissions: news of upcoming events; articles on technical services issues; reviews of publications; reports on committee work done on behalf of the Technical Services Section; opinions on cataloging policies and practices; bibliographies; cataloging cartoons and anecdotes; how-to and how-not-to advice; workshop reports; summaries of papers; questions and answers on topics of concern; local cataloging department news; evaluations of software, hardware, cataloging tools and products, Web sites, etc.

Unsigned contributions are supplied by the editor.

Subscription inquiries regarding *Theology Cataloging Bulletin* should be addressed to: Sara Corkery, Communications Specialist, American Theological Library Association, 300 South Wacker Drive, Suite 2100, Chicago, IL 60606-6701 USA; Toll-free: 888.665.ATLA, Outside N. America: 312.454.5100, Fax: 312.454.5505, E-mail: scorkery@atla.com.

The *Theology Cataloging Bulletin* is free to members of the American Theological Library Association, available on the ATLA website at: <http://www.atla.com/member/publications/tcb.html>.

Non-members may subscribe for \$55.00/year. Please make checks payable to "The American Theological Library Association."

SECTION ONE: NEW AND CHANGED SUBJECT HEADINGS
COMPILED BY JOANNA HAUSE

The subject headings in this list were selected from the Library of Congress Subject Headings Weekly Lists, available on the Library of Congress web site at:
<http://lcweb.loc.gov/catdir/cpso/cpso.html#subjects>.

This list consists of headings selected from the Library's list numbers 41—51 of 2008.

The following conventions are used, as in previous lists:
Headings are in a single alphabetical sequence, preceded by MARC tags. The record number (Library of Congress control number) follows the heading. The absence of the instruction [May Subd Geog] means that the heading is **not** to be further divided by place.

The following print constants appear:

UF = Used For

BT = Broader Term

RT = Related Term

SA = See Also

* Asterisks and highlighting mark lines (or paragraphs) that are CHANGES.

Selected changes to free-floating subdivisions are at the end of the list.

Please send suggestions or comments to me at jhause@seuniversity.edu or by mail to:
Joanna Hause
Steelman Library
Southeastern University
1000 Longfellow Blvd.
Lakeland, FL 33801
or fax to: (863) 669-4160.

**SECTION TWO, PART 1: LIBRARY OF CONGRESS SUBJECT HEADINGS/
DDC NUMBERS OF CURRENT INTEREST**
COMPILED BY PAUL OSMANSKI

"We have temporarily suspended mapping new Library of Congress Subject Headings to suggested DDC numbers to make room for a project to add DDC numbers to the authority records for BISAC (Book Industry Standards and Communications) subject headings. We will resume LCSH-DDC mappings in early 2009."- Mapping new LCSH with DDC numbers, OCLC, <http://www.oclc.org/dewey/updates/numbers/default.htm> (accessed February 1, 2009)

**SECTION TWO, PART 2: LC CLASSIFICATION
ADDITIONS AND CHANGES, B-BX
COMPILED BY ERIC FRIEDE**

The entries in this list were selected from the Library of Congress, Cataloging Policy and Support Office's Library of Congress Classification Weekly List, 43(2008:October 22) to 51(2008:December 17) and 1(2009:January 7) to 3(2009:January 21).

"Weekly lists of additions and changes to the Library of Congress Classification (LCC) are posted on the Cataloging Policy and Support Office Web site as they are approved"-- Library of Congress Classification (LCC) Weekly List [at <http://www.loc.gov/aba/cataloging/classification/weeklylists/>].

The class letter identifies the schedule to which changes and additions are made. New captions are accompanied by a full hierarchy as necessary; changes are indicated by a cancelled line and the addition of a new line. Changes are also highlighted in gray. Numbers that appear in square brackets are not printed in the printed editions of the classification schedules. They are shown on this list only to indicate the location of the corresponding caption or reference within the classification.

This list also includes selected changes and additions outside the B-BX classes relating to religious topics or library science.

SECTION THREE: NEWS AND VIEWS OF THE MEMBERS OF THE ATLA TECHNICAL SERVICES SECTION

EDITED BY LYNN BERG

GETTING READY FOR RDA: PART 2, *FRAR* AND *RDA* SCENARIOS

In the first article in this series, I gave an overview of *Functional Requirements for Bibliographic Records (FRBR)* as a conceptual model. In this article, I will discuss its companion document, *Functional Requirements for Authority Records (FRAR)*, and then look at how *RDA* envisions these models affecting library catalogs.

FRAR takes the ten entities defined in *FRBR* (person, corporate body, work, expression, manifestation, item, concept, object, event, and place) plus one more (family), defines them, identifies their attributes and delineates the relationships between them in library contexts. There is an acknowledgement that there could be other definitions, attributes and relationships developed in other contexts, but they are not elaborated.

The entity definitions and relationships noted here mirror the definitions and relationships delineated in *FRBR* and are the ones in common use in the library world. Where *FRAR* goes beyond current authority file data is in its list of attributes of the entities. For example, the list of attributes for a person includes: dates, such as birth and death; titles, such as rank, office, honor, etc.; other designations, such as “Saint,” “Spirit,” “Jr.,” etc.; gender; place of birth/place of death; country with which the person is identified; place of residence; affiliation; address of place of residence/business/employer; language in which the person writes; field of activity; profession/occupation; and biography/history. Some of these attributes are routinely recorded in the authority records currently created, but many, such as gender and current address have not been recorded in authority work done in this country. Those attributes are recorded in authority records in other countries, such as France.

If the cataloging world were to embrace *FRBR* and *FRAR*, how would it differ from what we do now? The biggest difference would be in the way we present data to users. Most library catalogs today are arranged in a simple alphabetical order. The OCLC catalog, while containing far more items than most other catalogs, is representative of the way data is organized. If a particular search key retrieves enough similar entries, they might be subarranged by type, so you must first choose a type of resource. Following that, the materials are arranged in a simple alphabetical order, title main entries followed by author main entries, subarranged by title. I searched C.S. Lewis, *Chronicles of Narnia* and retrieved ninety-five books. When I clicked on that line, I was presented by a set of brief records, arranged by title. However, the entry began with the main entry, then the title, so the arrangement followed thus: Aslan ... as a title main entry, followed by Thomas, Frederick, then Riordan, James, then Willhelmson, Peter, then Bellah, Mike. Since the arrangement was by title, the computer ignored the author names and subarranged strictly by title. In one catalog I searched, I found thirty titles, all formats together, with no discernable subarrangement. To a user, this arrangement must look entirely random! To find what is needed, the user has to look through all the entries, perhaps opening the full record to be able to make a decision on which fits their needs.

What if we could present the data in an organized manner, with each type of resource, each translation, each variation of the text sorted in an intelligible way? This is what a *FRBR*ized catalog attempts to do:

Catalog arranged by *FRBR* principles:

- Lewis, C. S. (Clive Staples), 1898-1963.
Chronicles of Narnia
- + Print.
- + English. Complete chronicles of Narnia. Illustrated by Pauline Baynes.
- + London : Collins, 1998. 523 p. : col. ill. ; 29 cm.
- + Copy in stacks
- + Copy in special collections. Does not circulate
- + Harmondsworth, Middlesex : Penguin Books, 1965. 7 v. : ill. ; 18 cm.
- + New York : HarperCollins, 2000. 523 p. : col. Ill. : 29 cm.
- + German. Die Chroniken von Narnia. Mit handkolorierten Ill. von Pauline Baynes
- + Wien : Ueberreuter, 2005. 523 p. : ill. ; 29 cm.
- + Italian. Le cronache di Narnia. Illustrazioni di Pauline Baynes.
- + Nuova ed. Milano : Mondadori, 2005- 3 v. : ill. ; 23 cm.
- + Russian. Perevod s angliiskogo N. Trauberg.
- + Moskva : EKSMO, 2002. 990 p. : ill. ; 22 cm.
- + Russian. Perevod s angliiskogo O.B. Bukhinoi.
- + Moskva : Kosmopolis, 1991. 683 p. : ill. ; 22 cm.
- + Videorecording.
- + English. Prince Caspian and the voyage of the dawn treader.
- + Wonderworks, 1989. 2 VHS video cassettes, 174 min., Color, Not rated
- + Dutch. Narnia : de musical : de leeuw, de heks en de klerkast.
- + Hilversum : Just Entertainment, cop. 2006. 1 dvd-video (160 min.) .

In this example, following the work, the arrangement is by expression (print + language vs videorecording + language). Subarranged under each expression is each manifestation (publisher, translator, illustrator). Subarranged under each manifestation would be each item (location, ownership, etc.)

This display represents a much easier presentation for users to navigate than our traditional display. Here they don't have to page through five, seven or ten screens of manifestations, arranged in no perceivable order to find the particular edition they need. They can see at a glance the important information about each expression and manifestation. If they want an English edition and don't particularly care which one, they could put a hold at the expression level and get whichever manifestation returned first. If they want a particular edition, they can easily sort out which one will fit their needs.

So, how do we get here from our traditional displays? *RDA* attempts to show us the way. *RDA* represents an attempt to take the theory of *FRBR* and *FRAR* and embody them in a set of practical cataloging rules. How successful *RDA* has been is the subject of a great debate at this time. To help envision how *RDA* can be used, the editors have developed three Implementation Scenarios. See

<http://www.collectionscanada.gc.ca/jsc/docs/5editor2.pdf> for the graphic representations of these scenarios. These scenarios are represented below in reverse order from the *RDA*

editors' presentation in order to show a progression from current cataloging to a fully functioning *FRBR/FRATR* model.

Scenario 3: This scenario reflects the state of many OPACs today. There are bibliographic records, and there are authority records. All attributes of the Group 1 entities are carried in the one bibliographic record and a possibly associated holding record. Authority and bibliographic records are not linked, so changes to authority records are not automatically reflected in the bibliographic records.

Scenario 2: This scenario reflects the state of OCLC and many other OPACs. There are still bibliographic records which carry all the Group 1 attributes, and there are authority records. In this scenario, the authority records are linked to the bibliographic records, so a change to an authority record will automatically change the heading on related bibliographic records. However, the authorized form of heading is stored in the bibliographic record, not just an identifier pointing to the authorized heading.

Scenario 1: This scenario represents a relational/object-oriented database structure. There are no longer bibliographic and authority records. There are work records, expression records, manifestation records, item records, personal entity records, corporate entity records, family entity records, concept entity records, object entity records, event entity records, and place entity records. Each of these records contains only the attributes (characteristics) which pertain to it. They are linked by externally imputed attributes such as assigned identifiers.

Thus, a work record will contain only those attributes which relate to the work, such as uniform title, subject identifiers, and any persons, corporate bodies, families pertaining to the work, such as the creator.

The expression record will contain only the attributes which pertain to the expression, such as language, particular title of the expression, notes relating to the expression, and any persons, corporate bodies, and families associated with the expression. These might be designated by assigned identifiers, rather than by the actual names.

The manifestation record will contain only information which pertains to the manifestation, such as the edition, publisher, notes on the manifestation, pagination, size, etc.

The item record will contain only information about the specific item, such as copy number, classification, bar code, and owner.

When it comes time to display the record to the patron, the computer will construct a bibliographic display which will contain the information needed by the patron, including replacing the identifiers with the actual content.

What does this mean for how catalogers will work in this brave new world? Every day, we determine the attributes which relate to each of the Group 1 entities. We just don't think of them that way:

To create a catalog record, we:

- Determine main entry, uniform title, subject headings (Work)
- Transcribe information about translators, scales of maps, playing times of CDs (Expression)
- Transcribe places of publication, publisher, dates of publication (Manifestation)
- Create call numbers and add holdings information (Items)

So, in this brave new world, it looks as if we will be doing the same things we have always done to catalog an item, just organizing the data in a new way.

Since about seventy-five percent of the works we catalog have only one work, one expression, and one manifestation, it would not make sense to create up to eleven records for each one!

Those working on this promise that the computer will do all this work behind the scenes. We will be building the records by searching for the identifiers and adding them to the record we are building. Then the computer will extract the various records.

If you go to <http://dublincore.org/dcmirdataskgroup/Scenarios?action=print>, you can see a set of scenarios different catalogers have set up to show how they conceive of a cataloger working in an *RDA* world. There are currently ten scenarios posted there.

Judy Knop
ATLA Representative to CC:DA

CHARLESTON CONFERENCE

The Charleston Conference was held in Charleston, South Carolina November 5-8, 2008. This annual conference focuses on issues relating to the library community and is unique in that vendors and publishers not only join librarians as presenters at a vendor showcase but are invited to participate side by side with librarians in all aspects of the conference. This participation allows all parties interested in issues within the library community to be present to debate, share ideas, and learn from one another. The Charleston Conference is unique among library conferences in that it offers a large number of presentations and panel discussions that are geared towards technical services interests.

The theme of the 2008 conference was “The Best of Times...The Worst of Times.” The panel and presentation topics included many areas of interest for technical services staff. Topics included, but were not limited to: serials resource management, collection development, e-books, managing e-collections, approval plans, managing library staff, license negotiations, e-publishing, digitization, preservation, the role of Google and Wikipedia in libraries, and metadata.

While it appears that many library conferences all but ignore acquisitions issues, the Charleston Conference provided many topics of interest for acquisitions professionals.

Librarians and vendors debated hot-button issues in acquisitions circles. The benefits and drawbacks of approval plans for smaller libraries were discussed as well as whether or not libraries are yielding too much to vendors in license negotiations. Some of the presentations and panel discussions were jointly presented by librarians and vendors. One collaboration between the two resulted in a presentation on process improvement for libraries and vendors in order to create a better working relationship. While there were a few presentations and panel discussions that came across more as an advertising tool for vendors, I was impressed by the genuine debate that went on between librarians, vendors, and publishers.

The most talked about presentations of the conference surrounded cataloging issues. One of the most talked about sessions was given by Deanna Marcum, Associate Librarian for Library Services at the Library of Congress. Ms. Marcum spoke on the topic of bibliographic control and the Library of Congress. After a few words, Ms. Marcum opened the session to a lively question-and-answer period. She was asked some tough questions concerning what many catalogers see as the deterioration of standards of Library of Congress cataloging. One contentious issue was that of the Library of Congress's decision to stop creating and/or updating series authority information. Ms. Marcum stated her case that the Library of Congress was doing the best that they could with what they had to work with. The other presentation that caused a lot of discussion was that of University of South Carolina's Professor Heidi Hoerman. Ms. Hoerman gave a presentation on *RDA*. Ms. Hoerman stated that she believed *RDA* "will die a quiet death" and predicted an updated version of *AACR2* would be published to take its place. Ms. Hoerman was very adamant on this topic. To my surprise, and I'm sure to the surprise of many others who saw Ms. Hoerman's presentation or read the slides of her presentation available on her website, Ms. Hoerman made a public reversal of her *RDA* stance in early January. In her email, sent to the AUTOCAT listserv and possibly other cataloging- or technical services-related listservs, Ms. Hoerman stated that she was wrong about the future of *RDA*. While she states that she is still trying to piece together the changes taking place in the cataloging world and the role *RDA* will have in respect to these changes, Ms. Hoerman no longer sees *RDA* as dead. The debate over *RDA* will most likely continue for some time.

The 2008 Charleston Conference was my first, and I could not have been happier with it. The Charleston Conference offers a wide variety of topics of interest to those in the library community. Technical services as a whole seems to get less attention at library conferences than other areas of librarianship. The Charleston Conference was a welcome surprise to me in this area. For those in technical services, especially in acquisitions, who feel their topics of interest are usually ignored at library conferences, I suggest you consider attending the Charleston Conference. At the Charleston Conference I had what I consider to be a rarity for technical services staff at a library conference—there were too many sessions of interest taking place at the same time. At the Charleston Conference, my biggest problem was narrowing down a list of interesting sessions and deciding which to attend.

COMPUTERS IN LIBRARIES CONFERENCE 2009

The 24th annual Computers in Libraries (CIL) conference will be held March 30 through April 1, 2009 at the Hyatt Regency Crystal City in Arlington, VA. The conference theme is "Creating Tomorrow: Spreading Ideas & Learning." For details, check out the Web site at <http://www.infotoday.com/CIL2009/>. Pre- and post-conference workshops are also available. Registration is going on now. Check with your regional OCLC representative for discount pricing. Palinet, for instance, offers more than a fifty percent discount if you register and pay through their offices by February 20. Palinet's registration form can be accessed at <http://www.palinet.org/media/CILRegForm2009.pdf>.
